

SG40

Floor Leveller

Cureflex SG40 is a totally new generation of high performance cementitious flexible floor levelling powder used as a Free Flowing Self Levelling System applied as an underlay over concrete substrates to improve or correct surface levels prior to the installation of Vinyl – Tiles - Floor Boards or Carpet.

Designed as a commercial grade floor leveller it offers extreme adhesion & flexibility for interior/exterior use.

Cureflex SG40 consists of hi-quality polymers combined with (HESCP) High Early Setting Cement Powder that allows product to free flow and set within 2 hours.

Cureflex SG40 is predominately designed as an underlay covering to improve the correctness of uneven floor surfaces prior to the installation of Vinyl – Tiles – Floor Boards or Carpet. Its unique matrix allows Cureflex SG40 to be used for fast repairs such as cracks and voids commonly found in concrete substrates. Also used to build up floor heights and levels.

Cureflex SG40 provides easy mixing, excellent spreadability, no slumping or shrinkage whilst maintaining optimum strength and flexibility. Smooth textured finish and engineered to provide ample open time offering superior workability. This allows applicator to make any final adjustments prior to product setting.

Cureflex SG40 high polymer levels, selected fine kiln dried sand granules, and additives are formulated to increase flexural and compressive strengths (up to 40mpa), providing high stability whilst maintaining normal free flowing self levelling characteristics.

Cureflex SG40 is compatible with most adhesives, sealants and general construction materials. Suitable over heated floor elements.

Cureflex SG40 has been tested in accordance to AS 1012.5 Australian Standard Requirements.
