

Ultra Light Tile Adhesive

Cureflex Ultra Light wall & floor Tile Adhesive is a totally new generation of high performance "Light Weight Technology" powdered adhesives that offers extreme adhesion and flexibility.

Designed as a commercial grade tile adhesive to suit all types of tiles & substrates for interior & exterior use.

Cureflex Ultra Light consists of hi-tech polymer modified, reinforced natural and acrylic fibres combined with various constituents never used in tile adhesives before.

It contains NO SAND and therefore weighs up to 50% less than other adhesives. That is: 20 litres in volume only weighs 10kg.

Cureflex Ultra Light provides easy mixing, excellent spreadability, no slumping or shrinkage whilst maintaining optimum strength and flexibility.

Light and smooth in texture and engineered to provide double extended open time offering superior workability. This will allow the applicator to make any final adjustments up to 1 hour prior to adhesive setting.

Recycled, reinforced natural acrylic fibres are used to increase flexural and compressive strengths, provide high stability and improved fire resistance.

Cureflex Ultra Light may also be used as a flexible filler to repair small voids, cracks or holes in most substrates and panels. Any excess adhesive can be scrapped or sanded smooth.

Cureflex Ultra Light conforms & exceeds AS 4992.1 - 2004 Australian Standard Requirements.

Available in grey and white bags
