

## UVX 4000 Waterproof Membrane

Cureflex UVX4000 is an industrial grade Permanent Flexible Membrane used as a unique waterproof membrane and thermal barrier. Engineered for roofs, floor and wall substrates to reduce heat absorption into buildings, offering potential energy savings to building owners. It also offers a high build application that provides a flexible seamless finish that can withstand harsh and varying climatic conditions. Apply externally over floor surfaces on pitched or flat roof areas.

Cureflex UVX4000 provides the benefits of a durable sheet membrane with the unique feature of a multi layer seamless finish, eliminating joints, overlaps and other risk points associated with welding and abutting traditional sheet membrane systems.

Cureflex UVX4000 is suitable for permanent exposure to varying climate conditions and UV light. Its designed as a 100% trafficable membrane that cures with a rough course surface that provides an excellent Non-Slip property.

Cureflex UVX4000 has strong adhesion properties and remains extremely flexible after curing. Developed using technological advanced polymer structures Cureflex UVX4000 displays superior (FEP) Flexible Elastomeric Properties, offering outstanding waterproof advantages such as low water vapour transmission properties and the ability to withstand permanently wet conditions without re-emulsification of the cured membrane.

### Features & Benefits

- Able to apply at a minimum 3mm thickness and up to 6mm thickness for extreme conditions
- Ideally suited for new construction and remedial works over aged or failed membranes
- Flexible for structural sheeting surfaces, such as CFC sheeting, Hebel Panels & Plywoods
- Able to withstand continuous harsh dry & wet environments and ponding
- High Build Seamless Protective Membrane for External Environments
- Durable Tough Seamless Resistance against Foot Traffic
- High Tensile Strength and reinforced against cracking
- Ready for Immediate Use Waterproof Membrane
- Superior Flexibility & Elastomeric Properties
- Easy to Apply – Roller or Spray Equipment
- User friendly and environmentally safe
- Unique Thermal Barrier Protection
- Strong Adhesion Properties

### Typical Areas of Use

- Refrigerated Vehicles
- Farming Sheds/Storages
- External Floors / Walls & Facades
- Portable Buildings, Cabins and Workshops
- New & Existing Roofs / Commercial Box Gutters
- Structures requiring an effective barrier to thermal condition
- Shipping Containers, Warehouse, Wineries & Storage Buildings

Cureflex UVX4000 complies with the AS/NZS 4858:2004 Australian Standard Requirements.
